- Efficient & Compact

For Ocean's Sake

Ocean Clean

"Vacuum Sealer VS1000"

Design features:

- Built-in unit odor and hygiene filter
- Small footprint
- Quick & easy operation
- Reduces size of waste bags up to >50%
- For galley, kitchen or bar room installation
- Made of polished stainless steel

For Illustration Only

The Ocean Clean VS1000 is an external vacuum device. Only the open side of the waste bag is going to be inserted into the compact vacuum chamber. Gaseous bag contents are sucked off by a high performance suction pump and filter via an odor cancelling hygiene filter.

On vessels, the device is installed by using a wall fixation kit.

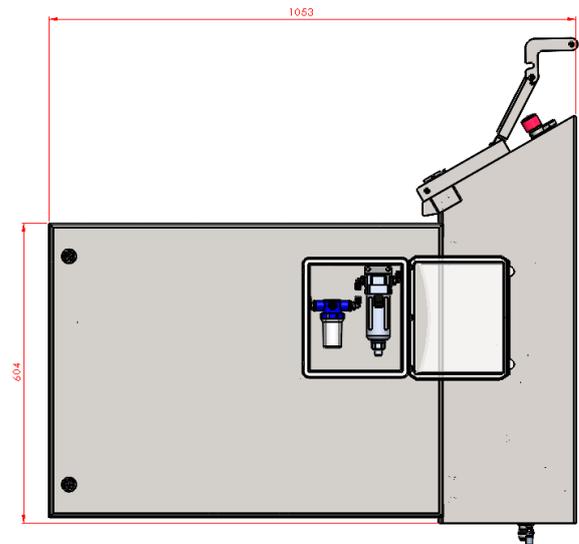

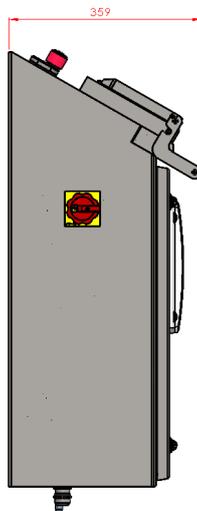

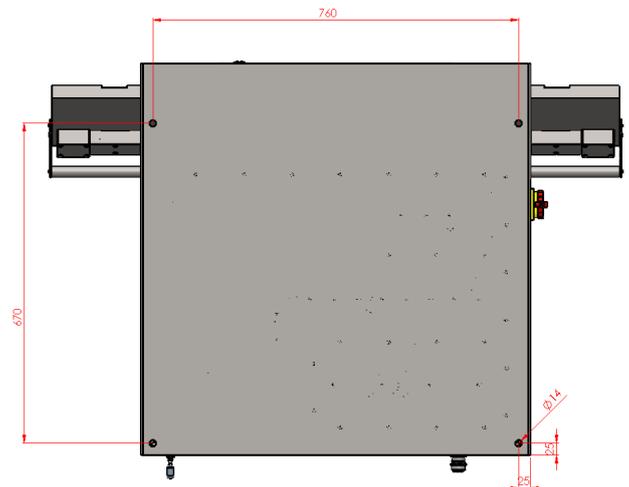

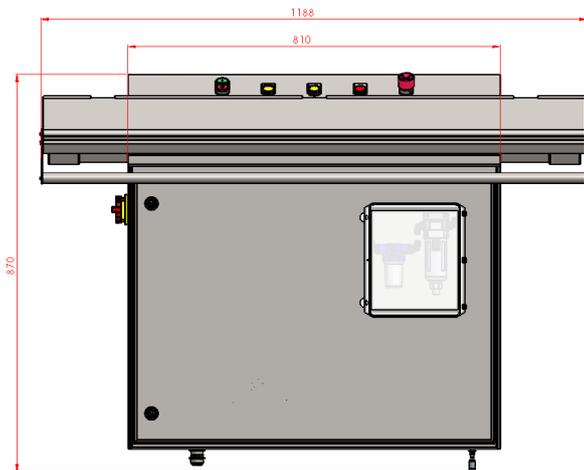

The bags to be used are made of compound films from PE/PA. The ultimate strength and tightness for most kind of waste are guaranteed by the thickness of the film material (160 μ), the composition of two different film materials (PE/PA) and a double sealing line.

Ocean Clean[®]—A German Manufacturer of
Oily Water Separators, Biological Sewage Treatment Plants
and Waste Handling Components.
